Why You Can't Just "Take the Panels Off"

If your roof needs replacing and you have solar panels, you're facing a job most roofers and most solar companies aren't fully equipped to handle alone. Panels have to come off before a new roof goes down, and go back on safely afterward — a process that carries real risk if it isn't done correctly.

Three Risks Homeowners Don't Expect

- **Electrical hazards.** Panels are live electrical systems. Improper shutdown can create fire risk or damage your inverter.
- **Warranty voids.** Most manufacturer warranties require certified removal & reinstallation, or coverage can be quietly voided.
- **Two-contractor gaps.** Separate roofers and solar companies leave homeowners stuck coordinating both, with panels sitting disconnected for weeks.

GenSun handles both, in-house.

One crew removes your panels, replaces the roof, and reinstalls the system with guaranteed reconnection — no separate contractors to coordinate.

THE SAFE REMOVAL PROCESS

5 Steps to Safe Removal & Reconnection

1. **System Shutdown**
   Solar system safely powered down at DC and AC level before any panel is touched.
2. **Careful Panel Removal**
   Panels unbolted, labeled, and stored so each returns to its exact original spot.
3. **Racking & Roof Prep**
   Racking removed, penetrations flashed and sealed, new roofing installed.
4. **Reinstallation**
   Panels and racking go back in original layout, remounted to code.
5. **Guaranteed Reconnection**
   System reconnected, tested, and verified producing power before we leave.

Ask any contractor:

- Are you licensed & insured for both roofing and solar?
- Will the same crew handle removal, roofing & reinstall?
- Do you guarantee reconnection before you leave?

Solar Removal & New Roof Checklist

One company: remove, re-roof, reinstall & reconnect

1. Gather Your Solar Information

- ☐ Solar installer name and phone number
- ☐ Do you own the system, or is it a lease or PPA?
- ☐ Solar contract, warranties and roof-penetration warranty
- ☐ Monitoring app login, so you can confirm production afterward
- ☐ Number of panels: _____ Year installed: _____

2. Signs Your Roof Needs Replacing

- ☐ Roof is 15–20+ years old
- ☐ Leaks or water stains on ceilings
- ☐ Curling, cracked or missing shingles
- ☐ Granules collecting in gutters

3. Questions to Ask Any Contractor

- ☐ Will one company remove, re-roof and reinstall?
- ☐ Is reconnection guaranteed in writing?
- ☐ Who pulls the permits and contacts the utility if needed?
- ☐ Where are the panels stored during the job?
- ☐ Are you licensed, insured and roofing-manufacturer certified?
- ☐ What warranties cover the roof and the reinstall work?

4. Project Day & After

- ☐ Clear the driveway for the dumpster and material delivery
- ☐ Keep pets and children away from the work area
- ☐ Confirm your system is producing in your monitoring app
- ☐ Keep your new roof and reinstall paperwork together
